Project Overview

Welcome to the documentation for the Car Company Website project. This project aims to create a modern and interactive web page for a fictional car company, incorporating various web development skills learned from the Udemmy course.

Table of Contents

1. Project Overview
2. Milestones
3. GitHub Repository Organization
4. Project Setup
5. Homepage Layout
6. Car Models Section
7. Bell Notification for Updates
8. Interactive Features
9. Additional Elements
10. Contact Us Section
11. GitHub Branches
12. Documentation
13. Estimated Total Time

Milestones

1. Project Setup (2 hours)

- Set up the project structure.
- Initialize Git repository.
- Create basic HTML structure for the website.

2. Homepage Layout (4 hours)

- Design and implement the homepage layout using HTML and CSS.
- Integrate a captivating background animation.

3. Car Models Section (5 hours)

- Create a section showcasing different car models with images and details.
- Implement a dynamic jumping letters effect for car model names.

4. Bell Notification for Updates (3 hours)

- Integrate a bell notification system to alert users about the latest updates or promotions.

5. Interactive Features (6 hours)

- Implement a stylish search box for users to filter and search for specific car models.
- Develop a carousel or scrolling images for an engaging user interface.
- Create an interactive tab preview system for additional details on each car model.

6. Additional Elements (4 hours)

- Incorporate a digital clock displaying the current time.
- Implement a dynamic currency stacking representation for pricing information.

7. Contact Us Section (3 hours)

- Design and implement a contact section with a form for inquiries.

GitHub Repository Organization

- **Main Branch (main):** Stable, production-ready code.
- **Development Branch (development):** Ongoing development and testing.
- **Features Branch (features):**
 - feature/homepage
 - feature/car-models
 - feature/notifications
 - feature/interactive-features
 - feature/additional-elements
 - feature/contact-us

Project Setup

1. Clone the repository: `git clone <repository-url>`
2. Navigate to the project directory: `cd car-company-website`
3. Install dependencies: `npm install` (if applicable)
4. Run the project locally: `npm start` (or any applicable command)
